

## *The Growers Corner*

**Grower:** Patrick Mobley  
**Company:** Mobley Greenhouses, Moultrie GA  
**Specialty:** Greenhouse tomato & pepper

Mobley Greenhouse is a grower in Georgia that has been in business since 1982. We are the largest supplier of tomato transplants in South Georgia. With 80 greenhouses, we also supply pepper, cabbage, watermelon, cantaloupe, and pine seedlings. We have been in business for 23 years.

We became aware of AgriPhage in 1997. We had been using standard copper applications and clearing practices to keep bacteria in control. We tried AgriPhage in a few of our houses, and felt like we finally had a good alternative to copper that was safe and effective. We began using AgriPhage as a preventive in 1998, and have been pleased overall with the amount of control we've been able to obtain.

Bacteria pressure varies between seasons, but by applying AgriPhage as a preventive, we are able to keep bacteria in check, so that if a flare-up occurs, the damage is minimized. If we do see bacteria, we send a plant sample to OmniLytics. If there are changes in the bacteria compared to the last sample we sent, they will send us a new AgriPhage formula. This way, we never have to worry about bacterial resistance.

Many of our customers in the area, including our own field operation, have begun using AgriPhage in the fields, and have seen positive results controlling bacteria in the fields.

I'm confident that you will be pleased with the results of AgriPhage as a great alternative for controlling bacteria in the greenhouse or field.

Sincerely,

Patrick Mobley  
Owner, Mobley Greenhouses
